

Software Developer Technical Exercise

Department of Veterans Affairs (VA) Boston Healthcare System
Cooperative Studies Program (CSP) Informatics Center
2026

Scenario

A group of clinicians have asked you to develop a web application that will let them quickly identify cancer patients that may be eligible for their clinical studies. However, each clinician in the group is interested in different cancers and has many different search criteria.

Specifications

The web application **must** be developed with the following specifications:

- Use the [Flask web framework](#) in Python 3.
- Use all data in the csv files of the “data/” directory.
- Allow users to view the data of a group of many patients simultaneously.
- Allow users to view the data of a specific individual patient.
- Allow users to filter all patients based on the following criteria:
 - First Name
 - Last Name
 - State
 - Cancer Diagnosis
 - Genes

Submission

After completing development of your product, zip up all files within the “Software_Developer_Exercise_2026/” directory.

Rename the zip file to “Software_Developer_Exercise_2026-{YourLastName}{YourFirstName}.txt”. The “.txt” must replace the “.zip” extension.

Then email the “Software_Developer_Exercise_2026-{YourLastName}{YourFirstName}.txt” file to your interview point of contact.

Technical Interview

The product of this exercise will be evaluated during the technical interview.

During the technical interview, you will be expected to showcase your product, explain how you developed it, and then make additional modifications to it under observation of the interviewer.
